

Westlake Industries – *Leading the Industry with Innovative Technology!*

MultiCam 3000 CNC High Definition Plasma Plate Cutter

Westlake Industries continues to make significant investments in high definition plasma plate cutting with the acquisition of the MultiCam 3000 CNC High Definition Plasma Plate Cutter. This is a truly remarkable machine providing up to 2 ½” thick high-definition plate cutting. Working with the MultiCam 3000 provides increased fabrication efficiencies, reduced costs and superior “on-time” performance for our clients.

Under-1-Roof Program

High-definition plasma plate cutting is another step in the advancement of Westlake’s **Under-1-Roof program**. This program is designed to reduce out-sourcing and maintain fabrication “in-house”. By doing so, we are able to improve supply chain control, increase production efficiencies and ensure on-time delivery.

The MultiCam 3000 CNC High Definition Plasma Plate Cutter is one more example of Westlake’s commitment to building value through industry leading innovation, technology and service.
