

Westlake Industries – *Leading the Industry with Innovative Technology!*

Pines Technology CNC #4 Pipe Bender

When it comes to complicated high tolerance bends the innovative solution is the Pines Technology CNC #4 Pipe Bender. Now operational at Westlake Industries, this sophisticated machine specializes in high tolerance bends thus reducing additional cutting requirements and costs. The number of fabricating welds are reduced as are the amount of NDE when fabricating custom CNC bends up through 4" IPS 1 ½ D, 180 degrees.

Under-1-Roof Program

High tolerance pipe bending is another step in the advancement of Westlake's **Under-1-Roof program**. This program is designed to reduce out-sourcing and maintain fabrication "in-house". By doing so, we are able to improve supply chain control, increase production efficiencies and ensure on-time delivery.

The Pines Technology CNC #4 Pipe Bender is one more example of Westlake's commitment to building value through industry leading innovation, technology and service.
