

Westlake Industries – *Leading the Industry with Innovative Technology!*

Victaulic Roll and Cut Grooving Tools

Working closely with Victaulic of Canada, Westlake Industries has established a strong working partnership in servicing the energy and mining sectors. This relationship is in part due to the utilization of the Victaulic Roll and Cut Grooving Tools in both our Burlington and Brantford plants. The Victaulic roll and cut grooving tools allow us to service the specific requirements demanded by the energy and mining sectors more effectively and with greater cost efficiencies.

Under-1-Roof Program

Utilization of the Victaulic Roll and Cut Grooving Tools are another step in the advancement of Westlake's **Under-1-Roof program**. This program is designed to reduce out-sourcing and maintain fabrication "in-house". By doing so, we are able to improve supply chain control, increase production efficiencies and ensure on-time delivery.

The Victaulic Roll and Cut Grooving Tools are one more example of Westlake's commitment to building value through industry leading innovation, technology and service.
